Projects

Apples to Oranges
React | Firebase
Chrome Extension

In this group project we wire framed, made mockups, and created a chrome extension and app that allows users to comparative shop various items across multiple websites. At any point the user can share their 'baskets' with friends for feedback. I worked on the front end creating components and working on the design of the site and extension.

Health Connect
Mongoose | Node.JS
Express

In this group project, we used wireframes and mockups from our UX team to make a website that connects school nurses to doctors. I worked on creating the schemas and routes in the backend for the nurses to create and update reports, while guardians had access to the child's profile.

Word of Mouth
Mongoose | Express
React | Node.JS | Redux

A personal project where I created a complete MERN stack app that gives the user the ability to search by date or venue and find a music concert in Austin to enjoy. In future iterations, I hope to incorporate a map API that can show the user shows around them at that moment.

~

Work Experience

Freelance | Web Developer
Dec 2016 - Present | Austin, TX

› I build rich powerful websites using languages, frameworks, and tools such as React, Express, NodeJS, Mongoose with a familiarity in many more.

Apple Inc. | Genius
Nov 2011 - Apr 2017 | Austin, TX / New York City, NY

› Formulated and launched an appointment check-in process calculated for the store which resulted in an improved customer experience. After a successful launch, the process was adopted in the other Austin retail location.
› Partnered with leadership to educate peers in a weekly, peer-led training to keep technicians up to date on ever evolving service practices, escalation paths, advanced troubleshooting knowledge.
› Attained Apple Certified iOS and Hardware certification in order to diagnose, troubleshoot, and repair customer relationships due to issues with Apple hardware and software.

Inventiv Music | Database Quality Assurance
Oct 2012 - Jan 2013 | New York City, NY

› Audited, maintained, and standardized a database of musicians, albums, and songs to enrich and simplify the customer journey through the business' catalog of artists and songs to be featured in commercial, television, and film productions.
